

Technip to supply high technological flexible pipes for Tupi BV Iracema North pre-salt field

November 21, 2014

Confirming its expertise and innovation in deepwater and leveraging its new state-of-the-art manufacturing plant in Açu, Brazil.

Technip was awarded a contract from Tupi BV, a consortium controlled by Petrobras Netherland BV (PNBV, 65%) and constituted also by BG (25%) and Galp (10%), for the ongoing development of the Iracema North field, located in the Santos Basin pre-salt area, Brazil.

Aiming to meet pre-salt challenges, the contract covers the supply of 114 kilometers of flexible pipes, including: gas lift, gas injection and gas export lines.

Technip's operating center in Rio de Janeiro, Brazil, will perform the engineering and project management. The highly technological flexible pipes are designed to meet Petrobras' requested service life for up to 30 years, sour service application, water depths of up to 2,500 meters and high pressures to inject gas in the reservoir (gas injection pipes). Delivery is scheduled to start in the first half of 2015.

The flexible pipes will be produced at Technip's manufacturing sites of Vitoria and Açu, the new state-of-the-art plant of the Group, which has already delivered its first products for the pre-salt developments in Brazil.

Adriano Novitsky, President of Technip in Brazil, commented: *"This award confirms the flexible pipe as a reliable and optimized solution for the pre-salt challenging applications and Technips' technological leadership in this business. It follows the flexible pipe supply contract awarded last year for the [Iracema Sul field](#).*
